RESEARCH INTERESTS

My research aims to understand the Earth's crustal processes across scales and their mechanisms and societal impacts, with the ultimate goals to improve the assessment and mitigation of geo-hazards and sustainable exploration of geo-energy. Current research focus is on elucidating the links between microseismicity, large earthquakes, and crustal deformation due to tectonic and human activities, through integrating laboratory rock mechanics & physics, theoretical and computational modeling, along with seismic and geodetic observations.
